Add the command line to a hotkey, which will be called whenever a specific string is found in a file. Hotkey can be set to execute this command: MKLANG=c:\test.txt a Or MKLANG=c:\test.txt a.b The value a is for a hotkey with the function "a" and a.b for hotkey with function "a" and function "b". For example: Hotkey macro name: b The command: mklang=c:\test.txt a.b Checks each line of file test.txt for the text: "Hello world" and runs the command a.b in the case of a match. Keymacro for "Hide Caption" key: KHLP=e:\test.txt Pressing the Hide Caption key and pressing Alt+H with the specified hotkey will hide the caption. The first press hides the caption for the active window, and the second press hides all the captions. It is possible to add a shortcut to the system's desktop instead of a macro, in which case a shortcut to the keyboard macros is created with the same name. The hotkey must match the name of the macro and the hotkey of the macro. For example: hotkey macro: b The macro hotkey b matches the name of the hotkey of the macro hotkey macro: b. Hotkey:e:\test.txt Creates a hotkey with the name of the macro with the name of the hotkey of the macro, the value of the hotkey of the macro, the file with the name of the hotkey of the macro and a file extension. Windows Management Instrumentation (WMI) is a set of standards for accessing management data that is used in managing operating systems in the form of applications, services, and drivers. Windows Management Instrumentation is a Microsoft-developed specification that is available as an open standard for the management of applications and devices. With it, you can monitor information and manage resources in devices like printer and scanners, or even laptops. WMI stands for Windows Management Instrumentation. The WMI specification enables remote management of an operating system. The key benefit of WMI is its role as a standard for managing operating systems; this means that any device or application could be connected to and monitored with the help of WMI. WMI provides a means of information collection and exchange, and a method of remote application and device management. WMI can be used to make Windows compatible with some third-party applications and services that aren't directly supported by Microsoft. In order to use WMI, you will need to install a WMI compatible driver for the operating system, and then install the appropriate WMI management console. Some other software features include: • Ability to monitor network, disk, printers and more • Troubleshooting and diagnosis tools • Remote registry scanning • A source code repository for the WMI specification • Remote management for services, applications, and devices • Security that is superior to any other security implementation • Easily administered, and effective tool to create and manage a WMI repository • Provide a Microsoft Management Console (MMC) interface Requirements: • A third-party WMI compatible driver is required. • An existing WMI repository is required.
